

Task 2.5:

1. In your own words, explain Django static files and how Django handles them.

Static files in Django are files like JavaScript, CSS or images that do not change on the web app and are fixed which are used to render a complete web app mainly used to customize the apps look a feel.

2. Look up the following two Django packages on Django's official documentation and/or other trusted sources. Write a brief description of each.

| Package | Description |
|------------|---|
| ListView | is a Django package that refers to view which is used to display multiple instances of a table in a database. To use ListView you should only import the 'ListView' Package from 'django.views.generic.list' and the model from which you want a list created then simply create a class based view with 'ListView' as parameter and specify the model with in the class. |
| DetailView | is a much similar Django package with 'ListView' in that both are class based generic views provided by Django, used to display data from a model. 'DetailView' is used to present details of single instance in a model, otherwise it can be used the same way as 'ListView'. |

3. Take inspiration from existing recipe applications.

Simply Recipes:

What's for Lunch →

EASY LUNCHES

KOREAN

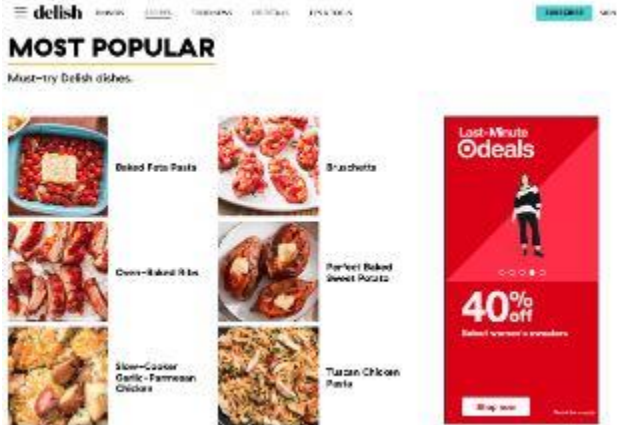

I like this site because it has a search function and menu bar. It also has clearly defined sections with different topics to inspire users.

My Recipes:

I like this site because it has a profile view where you can save recipes. I also like the way it advertises recently added recipes.

Delish Recipes:

I like this site because you can subscribe to news and look at the most popular recipes.
